Total Expense (TER): This ratio shows the charges, levies and fees relating to the management of the portfolio and is expressed as a percentage of the average net asset value of the portfolio, calculated over the period shown and annualised to the most recently completed quarter. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER should not be regarded as an indication of future TERs.

Transaction Costs (TC): This ratio shows the percentage of the value of the fund incurred as costs relating to the buying and selling of the fund's underlying assets. TC are a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, investment decisions of the investment manager and the TER.

Total Investment Charges (TIC): This ratio is simply the sum of the TER and TC, showing the percentage of the value of the fund incurred as costs relating to the investment of the fund. It should be noted that performance figures account for all costs included in the TIC ratio, so you should not deduct the TIC from performance figures, the performance is already net of the TIC.

Commentary

Fund review

The fund performed in-line with the index over the quarter. The last quarterly review of the index saw the inclusion of Exxaro and the deletion of Redefine Properties. Naspers remains the largest holding in the fund, with the fund being repositioned for these changes in constituents. The fund benefited from its exposure to Sasol, RMB Holdings and Goldfields, which were the three top performers, with Sasol returning 258% over the quarter. However, its exposure to Clicks, Shoprite Holdings and Spar Group Ltd detracted from performance over the quarter, as these were the three worst performers in the fund. Clicks returned -18.4% over the quarter.

Market overview

Global markets rallied on the back of fiscal and monetary stimulus. Economic activity improved over the quarter as many economies reopened. To minimise the COVID-19 economic damage to businesses and individuals, central banks and governments globally rolled out monetary and fiscal responses. In Q2 2020, MSCI EM was up +17.3% but behind MSCI EMEA (+17.8%) and MSCI World (+18.8%). The South African Reserve Bank took two drastic measures in supporting the local economy. The first was a 100bp cut in the key policy rate to 4.25% on 14 April 2020. Secondly, we saw a further cut in the key policy rate by 50bp to 3.75% on 21 May 2020. On 24 June 2020 finance minister Tito Mboweni presented the supplementary budget speech. The economic picture painted by the minister was bleak. SA GDP growth is expected to decline by 7.2% YoY in 2020, while growth next year is forecast at 2.1% YoY. Local indices were up over Q2 with Top 40 (+24.2%), All Share (+23.2%) and the Capped SWIX (+21.6%). ALBI (+9.9%), however the STeFI (+1.5%).

Looking ahead

COVID-19 coverage will continue to dominate the headlines as rising infection rates could lead to further social distancing measures being imposed or voluntarily adopted. Globally asset classes are pricing in the V shaped recovery. We are seeing positive signs of global cooperation as governments are coming together to find a solution to defeat the pandemic. Consensus expectations are currently for the global economy to rebound in 2021 once the health crisis is resolved and indeed for this to begin in the second half of 2020
