Fund returns within expected range of returns *

* This is based on historical data using the strategic allocations per asset class for this investment strategy and the historical returns of each asset class. The bars show the range of returns (highest and lowest returns) experienced over each rolling investment terms over this period. IN other words, the longer the investment period, the smaller the difference between the highest and the lowest return, indicating reduced volatility. The strategic asset allocations of the investment strategies used in this analysis may not be the same as the actual allocations of the fund. The investment performance is for illustrative purposes and is calculated by taking the actual initial fees and all ongoing fees into account and income is re-invested on the reinvestment date

Fund Commentary

South African equities did not follow global markets higher in January, with mining stocks coming under particular pressure. However, industrials and financials were also negative. The FTSE/JSE Capped SWIX lost 2.8% in the month. Over one year, the index is in the red at -2%.

Resources lost 6% in the month and 25% over one year. Industrials lost 1.4% in January but are positive over 12 months. Financials were also negative in the month, but well ahead of the other sectors over one year with a 12% return.

South African bonds were positive in January, with the JSE All Bond Index returning 0.7%. The one-year return of 7.3% lags cash (Stefi) at 8.2%. Inflation-linked bonds returned 0.1% in January and 8.2% over 12 months.

In contrast to local equities, JSE-listed property had another good month. The FTSE/JSE All Property Index (ALPI) returned 4.4% in January, and 16.5% over 12 months.

The rand was 2% weaker against the dollar in January, closing the month at R18.60. The 7% depreciation over 12 months boosted the returns of global assets from the point of view of South African investors.

Source: Old Mutual Multi-Managers as at 31 January 2024

Fees (VAT inclusive) (30/09/2023)	36 Month	12 Month
Total expense ratio (TER)	1.46%	1.47%
Transaction cost (TC)	0.06%	0.07%
Total Investment Charge (TIC)	**1.52%**	**1.54%**

Total expense ratio (TER) is a historical measure of the impact the deduction of management and operating costs have on a fund's value. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER should not be regarded as an indication of future TERs. Transaction Costs (TC) are costs relating to the buying and selling of the underlying managers' assets. TC are a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, investment decisions of the investment managers and the TER.

The TIC includes:

- Fund of funds service fee of 0.70% (excl VAT), which is inclusive of 0.55% (excl VAT) FSP11 investment management fees.
- Underlying fund's management fee, which is accrued daily and paid on a monthly basis (certain managers may charge performance fees).
- Other charges incurred by the underlying funds are deducted from their portfolios.
- As the weightings of the underlying funds may change from time to time, the total fees may vary.

Distributions (quarterly)	
For the last 12 months:	12.59c per unit
31/12/2023	2.43c per unit
30/09/2023	3.34c per unit
30/06/2023	2.26c per unit
31/03/2023	4.56c per unit

Disclosures

We aim to treat our clients fairly by giving you the information you need in as simple a way as possible, to enable you to make informed decisions about your investments.

- We believe in the value of sound advice and so recommend that you consult a financial planner before buying or selling unit trusts. You may, however, buy and sell without the help of a financial planner. If you do use a planner, we remind you that they are entitled to certain negotiable planner fees or commissions.
- Investments in unit trusts should ideally be a medium- to long-term strategy that takes cognisance of the Recommended Investment Term of each individual fund as stipulated in its Minimum Disclosure Document. A fund's or an investment strategy's ability to provide benchmark performance, or to achieve its performance target over its Recommended Investment Term on a net of fee basis may be impacted by market illiquidity, differences in fund and market pricing points, concentration risk and other local (and where applicable global) events, such as market- and political developments, macro-economic factors and healthcare risks such as Covid-19, amongst others. Your fund value may therefore go up or down and the investment capital or return on your investment is not guaranteed. How a fund has performed in the past does not necessarily indicate how it will perform in the future.
- The fees and costs that we charge for managing your investment are disclosed in the relevant fund's Minimum Disclosure Document (MDD) or table of fees and charges, both available on our public website or from our contact centre.
- Additional information on this proposed investment can be obtained, free of charge, from our contact centre.
- Fund valuations take place at approximately 15:00 each business day and at month end at 17:00. Purchase and redemption requests must be received by Strategic Investment Service Management Company (RF) (PTY) Ltd by 15:00 each business day to receive that day's price.
- Unit trusts are traded at ruling prices, may borrow to fund client disinvestments and may engage in scrip lending. The daily price is based on the current market value of the fund's assets plus income minus expenses (NAV of the portfolio) divided by the number of units on issue. Daily prices are available from Old Mutual Unit Trusts or Adviceworx contact centres.
- Excessive daily withdrawals from the fund may place the fund under liquidity pressures. In such circumstances a process of ring-fencing of withdrawal instructions and/or managed payouts over time may be followed.
- This fund holds assets in foreign countries and therefore it may have risks regarding liquidity, the repatriation of funds, political and macro-economic situations, foreign exchange, tax, settlement, and the availability of information.
- A fund of fund is a portfolio that invests in other funds which levy their own charges, which could result in a higher fee structure for the fund of funds.
- Old Mutual Unit Trusts is the manager of this co-branded fund and has full legal responsibility for it.
- The Net Asset Value to Net Asset Value figures are used for the performance calculations. The performance quoted is for a lump sum investment. The performance calculation includes income distributions prior to the deduction of taxes and distributions are reinvested on the ex-dividend date. Performances may differ as a result of actual initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Annualised returns are the weighted average compound growth rates over the performance period measured. Performances are in ZAR and as at 31 January 2024. Sources: Morningstar and Old Mutual Wealth.
