INVESTMENT OBJECTIVE

The Fund’s objective is to provide investors with high long term capital growth from a portfolio that maintains a moderate to high risk profile. The Fund may create some income but it will not be a primary objective for this Fund. The composition of the Fund shall reflect the investment structure of a retirement fund with a moderate to high risk profile and will comply with Regulation 28 of the Pension Funds Act.

RISK REWARD PROFILE: HIGH

FAIS CONFLICT OF INTEREST DISCLOSURE

The Analytics funds obtain their equity exposure by investing in the Analytics Ci Managed Equity Fund. Analytics earns an annual service fee of between 0.05% and 0.15% (excl. Vat) from this investment. The Analytics funds may obtain some of their offshore exposure by investing in the Analytics International Flexible Fund. Analytics may earn an annual fee of up to 0.32% from this investment.

CHARACTERISTICS

This is a multi-asset high equity portfolio which means that the portfolio may have an equity exposure ranging between 0% and up to 75% at all times. This portfolio may, at the discretion of the portfolio manager, invest up to 30% in securities that are listed on exchanges that are members of the World Federation of Exchanges. It may also invest up to 10% in Africa.

RISK DEFINITIONS

Market Risk
Equity markets are volatile and the price of equities fluctuate based on a number of factors such as changes in the economic climate, general movements in interest rates and the political and social environment, which will affect the value of the securities held in the unit trust, thereby affecting the overall value of the unit trust.

Currency Risk / Foreign Exchange Risk
This risk is associated with investments that are denominated in foreign currencies. When the foreign currencies fluctuate against the South African Rand, the investments face currency gains or losses.

Concentration Risk
Unit Trusts pool the assets of many investors and use the proceeds to buy a portfolio of securities. There are regulations in place which limit the amount that a unit trust may invest in securities, thereby spreading the risk across securities, asset classes and companies.

Liquidity Risk
This relates to the ability of the unit trust to trade out of a security held in the portfolio at or near to its fair value. This may impact on liquidity and in the case of foreign securities, the repatriation of funds.

Credit Risk
Credit risk arises where an issuer of a non-equity security or a swap is unable to make interest payments or to repay capital. The Fund may be exposed to credit risk on the counterparties in relation to instruments such as cash, bonds and swaps that are not traded on a recognised exchange. The possibility of the insolvency, bankruptcy or default of a counterparty with which the Fund trades such instruments, could result in losses to the Fund.

Inflation Risk
The risk of potential loss in the purchasing power of your investment due to a general increase of consumer prices.

Political Risk
The risk that investment returns could suffer as a result of a country’s political changes or country’s political changes in the country. Instability could come from changes in the country’s government, policy makers or military.

Tax Risk
The risk of potential loss in the purchasing power of your investment due to a general increase of consumer prices.

Compliance Risk
This refers to the risk of not complying with the legislation, regulations, prescribed investment limits and internal policies and procedures by the manager or the portfolio manager.

This document is not intended to address the personal circumstances of any Financial Services Provider’s (FSP’s) client nor is it a risk analysis or examination of any client’s financial needs. Collective Investment Schemes in Securities (“CIS”) are generally medium to long terms investments. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to future performance. CIS are traded at ruling prices and can engage in borrowing and scrip lending. Different classes of units apply to this portfolio and are subject to different fees and charges. A schedule of fees and charges is available on request from CI. CI does not provide any guarantee either with respect to the capital or the return of the portfolio. Forward pricing is used. Fluctuations or movements in exchange rates may cause the value of international investments to go up or down. International Investments may include additional risks such as potential constraints on liquidity and repatriation of funds, macroeconomic risk, political risk, foreign exchange risk, tax risk, settlement risk as well as potential limitations on the availability of market information. The portfolio may be closed from time to time in order to manage it more efficiently in accordance with its mandate. A fund of funds is a portfolio that invests in portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for the fund of funds. The Analytics portfolios are portfolios established and administered by CI, and Analytics has been appointed to manage and market the portfolios. Analytics is an indirect shareholder of CI. As a shareholder, Analytics may earn dividends from time to time and participation in any dividends may be linked to the revenue generated by CI from the Analytics portfolio, and from any other CI portfolios. CI retains full legal responsibility for this co-named portfolio. Additional information on the portfolio may be obtained, free of charge, directly from CI. CI is an affiliate member of the Association for Savings & Investment SA (ASISA).

Total Expense Ratio (TER): The above TER % has been annualised and indicates the percentage of the value of the portfolio which was incurred as expenses relating to the administration of the portfolio over the rolling 3 year period or since fund inception, on an annualised basis. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER’s cannot be regarded as an indication of future TER’s. Transaction Cost (TC): The above TC % has been annualised and indicates the percentage of the value of the portfolio which was incurred as costs relating to the buying and selling of the assets underlying the portfolio. Transaction Costs are a necessary cost in administering the portfolio and impacts portfolio returns. It should not be considered in isolation as returns may be impacted by many other factors. This includes market returns, the type of portfolio, investment decisions of the investment manager and the TER.

Total Investment Charge is the TER plus TC which indicates the percentage of the value of the portfolio which was incurred as costs relating to the investment of the portfolio. Performance quoted is for lump sum investment with income distributions, prior to deduction of applicable taxes, included. NAV to NAV figures have been used. The annualised return is the return of the performance period re-scaled to a period of one year. Performance is calculated for the portfolio and individual investor performance may differ as a result of initial fees, actual investment date, date of reinvestment and dividend withholding tax.
