MDD Issue Date: 15/07/2024

Fund Objective

The Catalyst SCI Global Real Estate Feeder Fund is a Rand denominated property equity Feeder Fund. The Fund will, apart from assets in liquid form, consist solely of participatory interest in the approved, Catalyst Global Real Estate UCITS Fund ("underlying fund") under the MLC Global Multi Strategy UCITS Fund Plc domiciled in Ireland. The fund has a medium to long term investment horizon and has a total return objective comprising both income return and capital appreciation.

Fund Strategy

The underlying fund will seek to achieve its objective primarily through investing in global real estate securities listed on recognised exchanges around the world. These assets will consist of permitted investment in assets in liquid form and exchange rate swaps, equity securities, fixed income securities, securities in listed entities that are backed by real estate property, closed ended property companies that are involved in the developing, letting and management of properties, money market and listed and unlisted financial instruments in line with the conditions as determined by legislation from time to time. Investments in foreign markets will be subject to any Exchange Control regulations applicable in South Africa at the time.

Total Expense Ratio	1.44
Transaction Cost	0.12
Total Investment Charges	1.56
Performance Fee	—
TER Measurement Period	01 April 2021 - 31 March 2024

Total Expense Ratio (TER) is the percentage value of the Financial Product that was incurred as expenses relating to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's.

Transaction Cost (TC) is the percentage value of the Financial Product that was incurred as costs relating to the buying and selling of the assets underlying the Financial Product. Transaction Costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Total Investment Charges (TER + TC) is the total percentage value of the Financial Product that was incurred as costs relating to the investment of the Financial Product. Performance fees are incentive fees earned by the manager for performance in excess of the benchmark.

Performance fees form part of the cost structure of the fund and are included in the Total Expense Ratio. Please visit www.sanlamunitrusts.co.za for a detailed list of our funds that charge performance fees together with their calculation methodologies.

Effective 1 October 2024, Sanlam Collective Investments will charge a monthly administration fee of R20 excluding VAT on retail investors whose total investment value is less than R50,000.

* Please note that the legal registered name of Catalyst SCI* Global Real Estate Feeder Fund is Catalyst Sanlam Collective Investments Global Real Estate Feeder Fund. SCI is an abbreviation for Sanlam Collective Investments.

Risk Profile

Glossary Terms

Annualised Returns

Annualised return is the weighted average compound growth rate over the period measured.

Asset Allocation

Asset allocation is the percentage holding in different asset classes (i.e. equities, bonds, property, etc.). It is used to determine the level of diversification in a portfolio.

Capital Volatility

Volatility is a measure of 'risk' and refers to the extent to which the price of an investment or capital value fluctuates over a certain period of time. Funds with high volatility usually offer the potential for higher returns over the longer term than low volatility funds.

Cumulative Returns

Cumulative return is the total growth experienced over the period measured.

Derivatives

Derivatives are instruments generally used as an instrument to protect against risk (capital losses), but can also be used for speculative purposes. Examples are futures, options and swaps.

Distributions

The income that is generated from an investment and given to investors through monthly, quarterly, biannual or annual distribution pay-outs.

Diversification

This is a strategy designed to reduce risk within a portfolio by combining a variety of investments (or asset classes) such as equities, bonds, cash or property, which are unlikely to all move in the same direction at the same time. This is designed to reduce the risk (and protect against capital losses) within a portfolio. Diversification allows for more consistent performance under a wide range of economic conditions as it smoothes out the impact of negative market events. The positive performance of some investments or asset classes should neutralize the negative performance of others.

Financial Instruments

Derivatives also known as financial instruments (such as a future, option, or warrants) whose value derives from and is dependent on the change in value of an underlying asset (such as a commodity, currency, or security) to protect against risk (capital losses).

Fund Objective

The fund objective is the portfolio's core goal.

Fund Strategy

The fund strategy is the way that the fund is managed to achieve the fund objective.

Information Ratio

The Information Ratio measures the market risk-adjusted performance of an investment or portfolio. The greater a portfolio's Information Ratio, the better its risk-adjusted performance has been compared to the market in general.

LISP (Linked Investment Service Provider)

A Linked Investment Service Provider is a financial institution which packages, distributes and administers a broad range of unit trust investments.

Maximum Drawdown

The maximum drawdown measures the highest peak to trough loss experienced by the fund.

Participatory Interests

When you buy a unit trust, your money is pooled with that of many other investors. The total value of the pool of invested money in a unit trust fund is split into equal portions called participatory interests or units. When you invest your money in a unit trust, you buy a portion of the participatory interests in the total unit trust portfolio. Participatory interests are therefore the number of units that you have in a particular unit trust portfolio.

Sharpe Ratio

The Sharpe Ratio measures total risk-adjusted performance of an investment or portfolio. It measures the amount of risk associated with the returns generated by the portfolio and indicates whether a portfolio's returns are due to excessive risk or not. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Standard Deviation

Standard deviation (also called monthly volatility) is a measure of how much returns on an investment change from month to month. It is typically used by investors to gauge the volatility expected of an

Additional Information

All reasonable steps have been taken to ensure the information on this MDD is accurate. The information to follow does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment decision. The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generally medium- to long-term investments. Please note that past performances are not necessarily a guide to future performances, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available on request from the Manager, Sanlam Collective Investments (RF) Pty Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained on request from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted. The portfolio may invest in participatory interests of other unit trust portfolios. These underlying funds levy their own fees, and may result in a higher fee structure for our portfolio. All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 ("CISCA"). The Manager may borrow up to 10% the market value of the portfolio to bridge insufficient liquidity. The fund may from time to time invest in foreign countries and therefore it may have risks regarding liquidity, the repatriation of funds, political and macroeconomic situations, foreign exchange, tax, settlement, and the availability of information. The fund may invest in financial instruments (derivatives) for efficient portfolio management purposes. The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates. Management of the portfolio is outsourced to Catalyst Fund Managers SA (Pty) Ltd, (FSP) Licence No. 36009 an Authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act, 2002. Sanlam Collective Investments (RF) (Pty) Ltd retains full legal responsibility for the co-named portfolio. Standard Bank of South Africa Ltd is the appointed trustee of the Sanlam Collective Investments scheme. Sources of Performance and Risk Data: Morningstar Direct, INET BFA and Bloomberg. A Feeder fund is a portfolio that invests in a single portfolio of a collective investment scheme, which levies its own charges and could result in a higher fee structure for the feeder fund. The risk free asset assumed for the calculation of Sharpe ratios: STEFI Composite Index. The highest and lowest 12-month returns are based on a calendar year period over 10 years or since inception where the performance history does not exist for 10 years. Obtain a personalised cost estimate before investing by visiting www.sanlamunittrustsmdd.co.za and using our Effective Annual Cost (EAC) calculator. Alternatively, contact us at 0860 100 266.

Portfolio Manager Comment

Market Commentary June 2024

The fund benchmark, the FTSE EPRA/NAREIT Developed Rental Net Total Return Index, recorded a net total USD return of 0.59% for the month of June. The best performing listed real estate market was the US which recorded a total USD return of 2.66% for the month. Europe (ex-UK) recorded the lowest total USD return of -5.65%. Year to date, the fund benchmark has returned -4.03% in USD, and the best performing market has been the US (-0.81%), whilst Hong Kong (-21.52%) has been the worst performing market.

The best performing sectors globally for the month in USD were Storage (+5.94%), Single Family Housing (+3.82%), and Manufactured Housing (+3.54%). The worst performing sectors were Student Housing (-2.62%), Office (-2.11%), and Diversified (-1.76%). Year to date, the best performing sectors globally are Healthcare (+9.39%), Single Family Housing (+7.17%) and Apartments (+5.08%). The worst performing sectors are Industrial (-11.09%), Diversified (-10.87%) and Office (-9.93%).

In the US, the Federal Reserve (Fed) left the benchmark interest rates unchanged in the range of 5.25-5.5% (highest level in more than two decades) despite the modest deceleration in CPI in May which rose by 3.3% compared to 3.4% in April. The US headline CPI remains above the Fed's long-term target of 2%, as such the Fed is only guiding to just one rate cut in 2024. This is a far cry from the three reductions they guided to in December 2023. With only four more scheduled meetings remaining for the balance of the year, the timing of the one rate cut is anyone's guess. The Fed's Summary of Economic Projections released in June indicates four rate cuts baked in for 2025.

In Europe, the European Central Bank (ECB) cut its benchmark rate by 25 basis points to 3.75% for the first time in nearly five years, as inflation inched towards their long-term target of 2% i.e., 2.6% in May 2024. This placed the ECB ahead of its counterparts, the Fed and the Bank of England (BoE) in terms of pulling the trigger on rate reductions. The announcement of the ECB rate cut was tainted by the mounting uncertainty about the outcome of the French National Assembly election which President Macron called earlier in the month of June. In the UK, the BoE voted to keep its bank rate unchanged at 5.25% which is the highest it has ever been in past 15 years. Interestingly, inflation in the UK is now in line with the BoE's long-term target of 2%, however the members of the BoE Monetary Policy Committee (MPC) indicated that they would like to see additional evidence of deceleration before a rate cut.

Making a call on when the central banks will cut interest rates has evidently proven challenging not only for the well-known and highly respected pundits in the financial markets sector but also for the Global leaders of central banks. That said, it is encouraging that inflation does appear to be moving in the right direction among some of the major developed economies globally.

The estimated forward FAD (Funds Available for Distribution) yield for the sector is 5.23% with a 4-year annual compound FAD growth of 5.41%. Based on our earnings estimates and market break-even inflation expectations, the real estate sector has attractively priced opportunities for astute active managers to generate superior risk-adjusted returns.
