

## WHAT IS THE FUND'S OBJECTIVE?

Balanced Defensive is in the first instance managed to protect capital over any 12-month period. In addition, we aim to achieve reasonable investment growth over the long run.

It is specifically managed to suit very cautious investors who want to draw an income over an extended period of time.

## WHAT DOES THE FUND INVEST IN?

Balanced Defensive can invest in a wide range of assets, such as shares, bonds, listed property and cash, both in South Africa and internationally.

The fund will typically hold a maximum of 50% of its investments in growth assets (shares and property). Shares usually offer the best growth, but this comes with the greatest risk of short-term losses. The fund's exposure to shares is therefore carefully balanced with more stable investments like bonds.

Exposure to foreign assets (excluding Africa) is limited to 30%. The fund is mandated to use derivative instruments for efficient portfolio management purposes.

## IMPORTANT PORTFOLIO CHARACTERISTICS AND RISKS

## Risk Profile

Maximum growth/  
minimum income exposures

The fund is tactically managed to protect and grow capital, as well as secure an attractive income.

A large and experienced investment team actively seeks out the best potential opportunities for income and growth, while taking great care to consider the different risks within the fund.

Balanced Defensive is specifically managed to not lose money over any 12-month period, although it cannot guarantee protection against losses.

Our intent is that the fund should produce a return of at least CPI + 3% p.a. over the medium term.

The fund is diversified across a range of assets reflecting its cautious risk budget. This includes a selection of shares that we believe are attractively valued, as well as quality income assets.

## HOW LONG SHOULD INVESTORS REMAIN INVESTED?

The recommended investment term is three years and longer.

The fund's exposure to shares may result in short-term price fluctuations that make it unsuitable for investors who can only invest for short periods

## WHO SHOULD CONSIDER INVESTING IN THE FUND?

- Pensioners and other investors requiring an income, especially those in the second half of retirement.
- Living annuity investors seeking a fund that aims to achieve both income and capital growth.
- Cautious pre-retirement investors seeking a low-risk fund for their retirement annuity, provident fund, preservation fund or pension fund.
- Trusts, endowments, foundations and charities who require long-term funding of a moderate spending rule.
- The fund is not appropriate for investors who want to build wealth over more than five years.

## WHAT COSTS CAN I EXPECT TO PAY?

From 1 April 2021 an annual fee of 0.75%(excl. VAT) is payable.

The annual management fee is accrued daily and paid monthly. Fund expenses incurred in the fund include fees payable to unconnected international fund managers on a portion of assets situated offshore as well as trading, custody and audit charges. All performance information is disclosed after deducting all fees and other fund costs.

We do not charge fees to access or withdraw from the fund.

*Please note that the commentary is for the clean class of the Fund.*

Despite setbacks associated with the spread of the Covid-19 virus's new Delta variant, the global economic recovery remains on track. Vaccinations in developed nations have progressed well in most countries and the route to a more normal world is looking increasingly likely. The rollout of vaccines in the emerging world, including South Africa (SA), has been far slower and normalisation of these societies and economies will consequently take longer.

The strong performance of commodities and the positive impact on SA's terms of trade have kept the current account in a substantial surplus and has supported the rand. Measured against the US dollar or the euro, the rand is now back to levels last seen in 2016 - five years ago. The firmer rand has also had a beneficial effect on expected inflation, giving the SA Reserve Bank enough room to keep interest rates at the current low levels for longer.

A number of positive political developments also marked the past quarter. The sale of the majority stake in SAA, the commitment to give independent private producers the right to generate power of up to 100 megawatts and the cancellation of the Turkish power ships on environmental grounds are signs that practical measures rather than ideology is winning these battles. The fight against corruption has also moved forward with several bold steps, including the suspension of ANC secretary general Ace Magashule, the placement on special leave of Health Minister Zweli Mkhize and, finally, the jail sentence handed down to former President Jacob Zuma by the highest court in the country. These significant steps bode well for the future of a cleaner government.

The JSE took a breather over the past quarter following the strong recovery seen since the end of March last year. The Capped SWIX returned only 0.6% over the last three months, but the one-year return is still a very healthy 27.6% coming off the low base of a year ago.

The stronger-than-expected domestic economy and, especially, the profitability of the mining sector will boost tax revenues for government, bringing some welcome relief to the precarious fiscal situation. This improved outlook was reflected in declining yields on government bonds, leading to a strong 6.9% performance for the All Bond Index over the quarter and 13.7% over the past year. Developed market equities continued their upward run and, although we believe valuations are no longer cheap, continued very low interest rates have kept the positive momentum going. The MSCI All Country World Index posted a total return of 7.4% in US dollars over the quarter, but this reduces to only 3.7% in rand terms due to the appreciation of the local currency.

The Fund posted a return of 1.8% over the quarter and 14.0% over the past year, well ahead of its inflation plus 3% target. Real returns over longer periods are all ahead of inflation and over most periods ahead of its target too. Over the past 10 years, the Fund has returned 9.5% per annum (p.a.), which translates into a pleasing real return of 4.5% p.a.

From an asset allocation point of view, we added exposure to equities after the big pandemic-induced selloff in early 2020. The higher equity exposure and consequent strong price recovery contributed the most to the Fund's one-year performance. Within equities, Anglo American, Altron, Northam Platinum, Impala Platinum and FirstRand contributed most to returns, while British American Tobacco, gold shares and Naspers detracted marginally.

Over the past year, we were very active in Richemont, the luxury goods company and owner of jewellery brands such as Cartier and Van Cleef and Arpels. The Fund sold its entire holding in early 2020 on the view that the pandemic-induced travel restrictions affecting China in particular would be very negative for the sales of luxury goods. However, towards the end of the third quarter, we took the view that the pandemic will most likely be controlled through global vaccinations, leading to a strong rebound in the sale of luxury goods. We therefore reestablished a sizable position in Richemont. The share price has since recovered well. Although quite highly rated now, its prospects for when global travel resumes, and its exceptionally strong balance sheet, are valid reasons to maintain it as one of the Fund's top 10 holdings.

At the time of writing, SA is in the midst of the third wave of the Covid-19 pandemic and the vaccine rollout has been far too slow. One can easily succumb to emotions of despair or anger when confronted by this pandemic, but when making investment decisions one should try to put these emotions aside in order to remain measured, analytical and objective. Our analysis continues to show very good value in many JSE-listed stocks. Our investment approach of looking through the cycle and focusing on normal earnings leads us to remain fully invested in equities at this time. After the selloff of early 2020, we added to our equity exposure and, whereas we have trimmed our global equities somewhat on valuation concerns, we maintain our higher SA listed stock exposure where we see good value across many sectors and companies.

It is in the global investment universe where we have more concerns. Global government bonds offer very poor value in our view and the valuation of equities does not leave much room for disappointment either. The Fund is consequently not at its full offshore weighting.

We do believe returns in excess of our inflation plus 3% target is achievable with the combination of assets currently held within the Fund.

## IMPORTANT INFORMATION THAT SHOULD BE CONSIDERED BEFORE INVESTING IN THE CORONATION BALANCED DEFENSIVE FUND

The Balanced Defensive Fund should be considered a medium- to long-term investment. The value of units may go down as well as up, and therefore Coronation does not make any guarantees with respect to the protection of capital or returns. Past performance is not necessarily an indication of future performance. The fund is mandated to invest up to 30% (including a maximum exposure of 5% to Africa, excluding South Africa) of its portfolio into foreign securities and may as a result be exposed to macroeconomic, settlement, political, tax, reporting or illiquidity risk factors that may be different to similar investments in the South African markets. Fluctuations or movements in exchange rates may cause the value of underlying investments to go up or down. Asset allocation and top 10 holdings are reflected on a look-through basis. Any African exposure (ex SA) is reflected under international assets. Coronation Management Company (RF) (Pty) Ltd is a Collective Investment Schemes Manager approved by the Financial Sector Conduct Authority in terms of the Collective Investment Schemes Control Act. Portfolio managed by Coronation Asset Management (Pty) (FSP 548) Ltd, an authorised financial services provider. The Management Company reserves the right to close the fund to new investors if we deem it necessary to limit further inflows in order for it to be managed in accordance with its mandate. Unit trusts are allowed to engage in scrip lending and borrowing. Standard Chartered has been appointed as trustees for the fund ([www.sc.com/za](http://www.sc.com/za); 011-2176600). Coronation is a full member of the Association for Savings & Investment SA (ASISA).

## HOW ARE UNITS PRICED AND AT WHICH PRICE WILL MY TRANSACTION BE EXECUTED?

Unit trusts are traded at ruling prices set on every trading day. Fund valuations take place at approximately 15h00 each business day, except at month end when the valuation is performed at approximately 17h00 (JSE market close) and forward pricing is used. Instructions must reach the Management Company before 14h00 (12h00 for the Money Market Fund) to ensure same day value. The payment of withdrawals may be delayed in extraordinary circumstances, when the manager with the consent of the fund trustees deem this to be in the interest of all fund investors. These circumstances may include periods when significant underlying markets suspend trading which will prevent accurate valuation of the instruments held in the fund. When the suspension of trading relates to only certain assets held by the fund, these assets may be side-pocketed. This process allows normal liquidity on the assets that can be valued, but will delay liquidity on the affected portion of the fund. If the fund is faced with excessive withdrawals, the affected withdrawals may be ring-fenced, which is the separation and delayed sale of the assets reflecting the interest of the liquidity seeking investors. It ensures that the sale of a large number of units will not force Coronation to sell the underlying investments in a manner that may have a negative impact on remaining investors of the fund.

## HOW WAS THE PERFORMANCE INFORMATION INCLUDED IN THIS FACT SHEET CALCULATED?

Performance is calculated by Coronation as at the last day of the month for a lump sum investment using Class P NAV prices with income distributions reinvested. Class A NAV prices were used for the period prior to the launch of Class P. All underlying price and distribution data is sourced from Morningstar. Performance figures are quoted after the deduction of all costs (including manager fees and trading costs) incurred within the fund. Note that individual investor performance may differ as a result of the actual investment date, the date of reinvestment of distributions and dividend withholding tax, where applicable. Annualised performance figures represent the geometric average return earned by the fund over the given time period. Unannualised performance represents the total return earned by the fund over the given time period, expressed as a percentage. The peer group average is calculated as the average return of all the funds in the respective ASISA category (excluding Coronation Funds in that category).

## BENCHMARK DETAILS

The benchmark used for performance purposes is CPI + 3%.

Note that we use the formal SA – Equity – General category benchmark as specified in the ASISA Standard on Fund Classification, which is currently the FSTE/JSE All Share Index, for compliance monitoring purposes.

## WHAT IS THE TOTAL EXPENSE RATIO (TER) AND TRANSACTION COSTS (TC)?

TER is calculated as a percentage of the average net asset value of the portfolio incurred as charges, levies and fees in the management of the portfolio. The TER charged by any underlying fund held as part of a fund's portfolio is included in the fund expenses portion of the TER, but trading and implementation costs incurred in managing the fund are excluded. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. The 1 year TER is for the 12 months to end of September 2019 (updated annually). The 3 year TER is for a rolling 36-month period to the last quarter end (December, March, June and September).

Transaction costs are a necessary cost in managing a fund and impacts the fund's return. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

The Total Investment Charge is the sum of the Total Expense Ratio (TER) and transaction costs.

## ADVICE AND PLATFORM COSTS

Coronation does not provide financial advice. If you appoint an adviser, advice fees are contracted directly between you and the adviser. For more information please contact the relevant platform (Linked Investment Service Provider or Life Assurance Provider).

## WHERE CAN I FIND ADDITIONAL INFORMATION?

Additional information such as daily fund prices, brochures, application forms and a schedule of fund fees and charges is available on our website, [www.coronation.com](http://www.coronation.com)
