**Fund Objective**

The investment objective of the portfolio is to provide investors with a high level of income. As a secondary objective the portfolio aims to achieve low to moderate levels of capital growth over the long term.

**Fund Strategy**

Investments to be included in the portfolio will, apart from assets in liquid form, consist of non-equity securities, fixed interest instruments (including, but not limited to, bonds, cash deposits and money market instruments), preference shares of an income nature and listed property securities as well as any other income enhancing securities which are considered consistent with the portfolio’s primary objective and that the Act or Registrar may allow from time to time. In order to achieve the portfolio objective, the portfolio’s asset allocation and instrument selection will be actively managed and will continually reflect the portfolio manager’s view of the relative attractiveness of the property shares, property related securities, loan stock listed on exchanges, non-equity securities, bonds, money market instruments and preference share markets. Apart from achieving the primary objective of generating high income, the portfolio will actively invest in bonds and/or property securities in order to achieve the secondary objective of long term capital growth. The portfolio’s property exposure could be aligned with that of the Absa South African Multi Asset Income portfolios category. The portfolio may also invest in listed and unlisted financial instruments in accordance with the Act as well as in offshore investments as permitted by legislation. The Manager may also include participatory interests and other forms of participation of local and global collective investment schemes, or other similar schemes operated in territories with a regulatory environment which is to the satisfaction of the Manager and Trustee of a sufficient standard to provide investor protection at least equivalent to that in South Africa and which is consistent with the portfolio’s primary objective. However, the fund will purposefully only invest in South African securities to allow investors the option of a clean asset allocation between their domestic and foreign exposure.

Glossary Terms

Annualised Returns
Annualised return is the weighted average compound growth rate over the period measured.

Asset Allocation
Asset allocation is the percentage holding in different asset classes (i.e. equities, bonds, property, etc.). It is used to determine the level of diversification in a portfolio.

Distributions
The income that is generated from an investment and given to investors through monthly, quarterly, bi-annual or annual distribution pay-outs.

Derivatives
Derivatives are instruments generally used as an instrument to protect against risk (capital losses), but can also be used for speculative purposes. Examples are futures, options and swaps.

Liquidity
The ability to easily turn assets or investments into cash.

Information Ratio
The Information Ratio measures the market risk-adjusted performance of an investment or portfolio. The greater a portfolio’s Information Ratio, the better its risk-adjusted performance has been compared to the market in general.

Maximum Drawdown
The maximum drawdown measures the highest peak to trough loss experienced by the fund.

Money Market Instruments
A money market instrument is a low risk, highly liquid, short-term (one year or less) debt instrument, issued by financial institutions or governments, that tend to have lower returns than high-risk investments.

Participatory Interests
When you buy a unit trust, your money is pooled with that of many other investors. The total value of the pool of invested money in a unit trust fund is split into equal portions called participatory interests or units. When you invest your money in a unit trust, you buy a portion of the participatory interests in the total unit trust portfolio. Participatory interests are therefore the number of units that you have in a particular unit trust portfolio.

Regulation 28
Regulation 28 of the Pension Funds Act sets out prudent investment limits on certain asset classes in investment funds. It applies specifically to investments in Retirement Annuities and Preservation Funds. The allowed maximum exposures to certain asset classes is: 75% for equities, 25% for property, 25% for foreign (offshore) assets and 5% African assets.

Risk-adjusted returns
Risk-adjusted return refines an investment’s return by measuring how much risk is involved in producing that return, which is generally expressed as a number or rating.

Sharpe Ratio
The Sharpe Ratio measures total risk-adjusted performance of an investment or portfolio. It measures the amount of risk associated with the returns generated by the portfolio and indicates whether a portfolio’s returns are due to excessive risk or not. The greater a portfolio’s Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Standard Deviation
Standard deviation (also called monthly volatility) is a measure of how much returns on an investment change from month to month. It is typically used by investors to gauge the volatility expected of an investment.

Additional Information
All reasonable steps have been taken to ensure the information on this MDD is accurate. The information to follow does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment decision. The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generally medium- to long-term investments. Please note that past performances are not necessarily a guide to future performances, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available on request from the Manager. Sanlam Collective Investments (RF) (Pty) Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained on request from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted. The portfolio may invest in participatory interests of other unit trust portfolios. These underlying funds levy their own fees, and may result in a higher fee structure for our portfolio. All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 (‘CISCA’). The Manager may borrow up to 10% the market value of the portfolio to bridge insufficient liquidity. The fund may from time to time invest in foreign countries and therefore it may have risks regarding liquidity, the repatriation of funds, political and macroeconomic situations, foreign exchange, tax, settlement, and the availability of information. The fund may invest in financial instruments (derivatives) for efficient portfolio management purposes. The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates. Management of the portfolio is outsourced to Sanlam Investment Managers (Pty) Ltd, (FSP) Licence No. 579, an Authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act, 2002. Sanlam Collective Investments (RF) (Pty) Ltd retains full legal responsibility for the co-named portfolio. Standard Bank of South Africa Ltd is the appointed trustee of the Sanlam Collective Investments scheme. Sources of Performance and Risk Data: Morningstar Direct, INET BFA and Bloomberg. The risk free asset assumed for the calculation of Sharpe ratio: STFI1 Corsi Index. The highest and lowest 12-month returns are based on a calendar year period over 10 years or since inception where the performance history does not exist for 10 years. Obtain a personalised cost estimate before investing by visiting www.sanlamunittrustsmdd.co.za and using our Effective Annual Cost (EAC) calculator. Alternatively, contact us at 0860 100 266.

Portfolio Manager Comment

As at 30 September 2020

Portfolio overview
The third quarter of 2020 saw a welcome recovery from the severe impact of the coronavirus pandemic on the global economy. Lockdown measures were implemented all around the world, economists cut their GDP forecasts, governments announced significant fiscal spending programmes to fight against the virus and central banks supplied a deluge of liquidity to the market. South Africa proved no exception. In particular, GDP growth was revised downwards and the SARB continues to support the Bond market with an accommodative monetary stance. In the latter stages of the quarter, the SARB kept the policy rate on hold and it now appears that we have reached the bottom of the current interest rate cycle.

The corporate bond market continues to remain largely untradeable, albeit at slightly more liquid levels than in March. The credit ratings of many names have been downgraded in line with the sovereign downgrade, as well as the prospects for weaker earnings. Conditions in the market remain tight, and their improvement will depend on the extent and the speed at which the economy normalises from lockdown conditions. As to the recovery from the pandemic, what is concerning at present is that new infections continue to surge around the world as lockdowns ease, South Africa not excepted. Conditions remain uncertain, but should another round of extensive lockdowns be required, it would put further pressure on governments and corporates, and by extension further erode credit quality.

Asset classes bounced back in Q3 2020 from oversold levels to post solid returns in a risk-on bout of enthusiasm for the resumption of economic activity. Over the quarter, the JSE All Share Index returned 0.7%, the All Bond Index 1.5%, inflation-linked bonds 1.2% and the JSE Property Index -14.1%. The Preference Share Index fell by -4.8% over the period whilst cash returned 1.2%. Despite the recovery in asset class performance, these continue to prove tough times for income funds and the fixed interest space in general. Liquidity is prized under these conditions, as are sound credits. Opportunities will emerge as debt reprices to more attractive yields, but we can expect more volatility before the credit market settles. In the meanwhile, the market will take its cues from the success of containment of the virus and from the economic recovery as it unfolds.

Fund Comment
The CPAM Enhanced Income Fund returned 1.53% after costs over the third quarter of 2020. Bonds added value over the quarter but benign spreads on the credit book supported the performance of the Fund. The Fund continues to focus on liquidity management until the market shows signs of more two-way activity. New cash flows will be deployed to avail the Fund of opportunities as they present themselves, especially in those assets beginning to show good value. The yield-liquidity trade-off remains a key consideration in the management of the Fund.
