Element Real Income Sanlam Collective Investments Fund

Minimum Disclosure Document
As of 2019/09/30

Fund Objective

The primary objective of the portfolio will be to achieve a high income yield that endeavours to grow in line with inflation (CPI) and with potential for capital growth for investors.

Fund Strategy

The portfolio will consist of investments in bonds, fixed deposits, structured money market instruments, listed debentures, property collective investment portfolios, listed property equities and other high yielding securities. The Manager shall be permitted to invest on behalf of the portfolio in offshore investments as legislation permits. The portfolio will be managed in accordance with regulations governing pension funds.

Fund Information

Ticker: FRIA
Portfolio Manager: Terence Craig & Andrew Bishop
ASISA Fund Classification: South African - Multi Asset - Low Equity
Risk Profile: Cautious
Benchmark: CPI + 3%
Fund Size: R 127 706 777
Portfolio Launch Date: 2002/10/01
Fee Class Launch Date*: 2002/10/01
Minimum Lump Sum Investment: R 10 000
Minimum Monthly Investment: R 500
Income Payment Date: March, June, September & December
Portofolio Valuation Time: 15:00
Transaction Cut Off Time: 15:00
Daily Price Information: Local Media
Repurchase Period: 2-3 business days

Risk Profile
Cautious
You are cautious about taking on risk (i.e. have a limited exposure to equities in your portfolio). You want your capital to be safe and prefer fairly stable income and/or income growth. Even knowing that equities are a riskier asset class, you are comfortable to have some exposure, albeit limited, to them because you know they will add that little extra to your portfolio.

Glossary Terms
Annualised Returns
Annualised return is the weighted average compound growth rate over the period measured.
Asset Allocation
Asset allocation is the percentage holding in different asset classes (i.e. equities, bonds, property, etc.). It is used to determine the level of diversification in a portfolio.
Cumulative Returns
Cumulative return is the total growth experienced over the period measured.
Distributions
The income that is generated from an investment and given to investors through monthly, quarterly, bi-annual or annual distribution pay-outs.
Diversification
This is a strategy designed to reduce risk within a portfolio by combining a variety of investments (or asset classes) such as equities, bonds, cash or property, which are unlikely to all move in the same direction at the same time. This is designed to reduce the risk (and protect against capital losses) within a portfolio. Diversification allows for more consistent performance under a wide range of economic conditions as it smooths out the impact of negative market events. The positive performance of some investments or asset classes should neutralize the negative performance of others.
Financial Instruments
Derivatives also known as financial instruments (such as a future, option, or warrant) whose value derives from and is dependent on the change in value of an underlying asset (such as a commodity, currency, or security) to protect against risk (capital losses).
Fund Objective
The fund objective is the portfolio's core goal.
Fund Strategy
The fund strategy is the way that the fund is managed to achieve the fund objective.
Information Ratio
The Information Ratio measures the market risk-adjusted performance of an investment or portfolio. The greater a portfolio’s Information Ratio, the better its risk-adjusted performance has been compared to the market in general.
Collective Investment Schemes
Collective Investment Schemes (CIS) (also called unit trusts) are portfolios of assets such as equities, bonds, cash and listed property, in which investors can buy units. They allow private investors to pool their money together into a single fund, thus spreading their risk across a range of investments, getting the benefit of professional fund management, and reducing their costs.
Market Capitalization
Market capitalization is the total value of the issued shares of a publicly traded company; it is calculated by multiplying the share price by the number of shares in issue.
Maximum Drawdown
The maximum drawdown measures the highest peak to trough loss experienced by the fund.
Participatory Interests
When you buy a unit trust, your money is pooled with that of many other investors. The total value of the pool of invested money in a unit trust fund is split into equal portions called participatory interests or units. When you invest your money in a unit trust, you buy a portion of the participatory interests in the total unit trust portfolio. Participatory interests are therefore the number of units that you have in a particular unit trust portfolio.
Sharpe Ratio
The Sharpe Ratio measures total risk-adjusted performance of an investment or portfolio. It measures the returns associated with the risks generated by the portfolio and indicates whether a portfolio’s returns are due to excessive risk or not. The greater a portfolio’s Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).
Standard Deviation
Standard deviation (also called monthly volatility) is a measure of how much returns on an investment change from month to month. It is typically used by investors to gauge the volatility expected of an investment.

Portfolio Manager Comment
As at 30 September 2019
Quarterly Commentary
The Element Real Income SCI Fund realised a total return of 0.9% for the quarter to the end September 2019, underperforming its benchmark (CPI+3%) return of 1.8% over this period. The September 2019 quarterly performance brings the rolling one-year total performance of the Fund to 4.3% (net of fees) – underperforming its benchmark return of 7.5% over the same period. It should be noted that on a relative basis the Fund is rated in the top quartile of its category over the past rolling three years.
Preference shares, cash and bonds outperformed equities and property over the past quarter. This was primarily due to a weak performance from local equities (-4.6%) and listed property (-4.4%). The property index has declined by c.34% since its peak in December 2017. Property fundamentals has deteriorated due to weaker economic conditions impacting vacancies as well as over-built balance sheets. Local equities (JSE All Share Index) continued to underperform the S&P500 (+1.7% in US$) and has now underperformed the S&P500 since January 2011 (8 years).
Property and local equities detracted from the fund’s performance over the past 12 months. The property shares that underperformed were Hospitality B and Delta properties. Hospitality was impacted by weaker sentiment in the hotel sector while Delta was impacted by the inability to sign long term leases with tenants. We have subsequently exited our Delta position.
Our local equities outperformed their benchmark over the past quarter due to our overweight positions in AngloGold Ashanti, Impala Platinum and AB Inbev as well as our underweight position in Sasol. AngloGold has benefited from a strong gold price and weaker Rand. The gold price has increased by c.24% over the past 12 months to $1,472/once. The rally in the gold price was driven by weaker global sentiment and low global interest rate. Impala Platinum benefited from the increased palladium price and weaker Rand. The palladium price has increased by c.56% over the past 12 months to $1,675/once due to increased demand from China.

Additional Information

All reasonable steps have been taken to ensure the information on this MDD is accurate.

The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generally medium- to long-term investments. Please note that past performances are not necessarily a guide to future performances, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available from the Manager, Sanlam Collective Investments (RF) Pty Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending.

Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax.

Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date.

Lump sum investment performances are quoted. The portfolio may invest in participatory interests of other unit trust portfolios. These underlying funds levy their own fees, and may result in a higher fee structure for our portfolio. All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 (“CISCA”).

The Manager may borrow up to 10% the market value of the portfolio to bridge insufficient liquidity. The fund may from time to time invest in foreign instruments which could be accompanied by additional risks as well as potential limitations on the availability of market information. Investments in foreign instruments are also subject to fluctuations in exchange rates which may cause the value of the fund to go up or down.

The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates. Management of the portfolio is outsourced to Element Investment Managers (Pty) Ltd, (FSP) Licence No. 663, an Authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act, 2002.

Sanlam Collective Investments (RF) (Pty) Ltd retains full legal responsibility for the named portfolio. Standard Bank of South Africa Ltd is the appointed trustee of the Sanlam Collective Investments scheme.

Sources of Performance and Risk Data: Morningstar Direct, INET BFA and Bloomberg. The risk free asset assumed for the calculation of Sharpe ratios: STEFI Composite Index. The highest and lowest 12-month returns are based on a calendar year period over 10 years or since inception where the performance history does not exist for 10 years. Obtain a personalised cost estimate before investing by visiting www.sanlamunittrustsmd.co.za and using our Effective Annual Cost (EAC) calculator. Alternatively, contact us at 0860 100 266.
