Glossary

Comparator: Benchmark is used for comparing Fund performance, but is not a constraint to Fund Investment. **Price to Book:** The price per share of a stock divided by its book value (i.e., net worth) per share. For a portfolio, the value represents a weighted average of the stocks it holds. **Price to Earnings (12-Month Trailing)** is the share price of a stock, divided by its per-share earnings over the past year. For a portfolio, the value represents a weighted average of the stocks it holds. **Price to Cash Flow:** Supplements price/earnings ratio as a measure of relative value for a stock. For a portfolio, the value represents a weighted average of the stocks it holds. **Standard Deviation:** Measure of the degree to which a fund's return varies from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that a fund's performance will fluctuate from the average return.
