

INVESTMENT OBJECTIVE

The investment objective of this portfolio is to provide investors with income and capital growth whilst preserving capital over time and reducing volatility of returns over the short to medium term. The underlying funds in the portfolio invest in a combination of equities, listed property, bonds and money market. The portfolio is aimed at investors who can tolerate low risk, as explained only by volatility, as it may have a maximum of only 40% exposure to equities. The portfolio adheres to the prudential investment guidelines set by Regulation 28.

PORTFOLIO MANAGER'S COMMENTARY

International:

Instead of the expected traditional yearend equity rally, markets deteriorated sharply in December as concern about the sustainability of global economic growth, uncertainty about future FED monetary policy coupled with negative geopolitical developments punctured investor sentiment. Events such as the USA/China trade dispute against the background of slowing Chinese growth, the partial US government shutdown, Brexit and President Macron's challenges in France continued to dominate the headlines. Furthermore, the changing of the guard in American politics with the Republicans' losing control of the congress and the prospect of increasing divisive politics added to the woes. Also, the ongoing Mueller investigation into the possible collusion between the Trump campaign and the Russians are adding to the uncertainty. As expected the FED raised interest rates in December by 25 basis points but has since indicated that they are likely to tread softer on the pedal in 2019 depending on the incoming economic data. On the employment front the December US nonfarm payroll data came in far stronger than expected confirming that US growth remains vibrant – 312 000 new jobs were added against an expected 177 000 –, the unemployment data retreated somewhat to 3.9% from 3.7% amid greater participation while average hourly wage growth increased by 3.2% year on year. Against this background and with fourth quarter corporate earnings about to kick off, investors now seem to be more sceptical about the sustainability of the healthy earnings growth they've become accustomed to. The important global indices lost substantial ground in December – the MSCI All Country -7.76% (-13.80%ytd); the Dow Jones -8.59% (-3.48%ytd); the S&P 500 -9.03 (-4.38%ytd) and the MSCI Emerging Markets by -1.32% (-15.83%ytd) – all in US dollars.

Local:

On the local economic front the situation remains depressed and the negatives continued to outweigh the positives in December. While the SA economy has emerged from recession, the pace of improvement remains disappointing with a fairly widespread expectation that the SA economy will continue to "tread-water" until after the National Election. Policy uncertainty remains a major concern within the private sector, while the re-introduction of load-shedding by Eskom towards the end of 2018 will also have an impact. The financial position of the large state entities remains a cause for concern as government will probably have to provide further substantial financial support from scarce resources. Other negatives were a deterioration in SA's leading economic indicator, a further slump in the SA business confidence and a somewhat unexpected 25 basis points increase in interest rates by the SA Reserve Bank. On a more positive note, the economy emerged from recession in the third quarter with GDP growth of 2.2% quarter on quarter, the December PMI increased to above 50 index points for the first time in 2018 and there was a combined reduction of R3.07 per litre in the petrol price during December 2018/January 2019. Also encouraging is the tone of the most recent credit rating reviews which suggests that SA's credit rating should remain unchanged in the short-term. The SA equity market has now corrected to attractive levels that offer good value. Contrary to the global trend the FTSE/JSE All Share index advanced by +4.25% (-8.53ytd) in December. While the KI Equity Fund followed suit and gained by +0.9% (-5.00%ytd) the fund of fund portfolios lost ground – Balanced -0.37% (-5.76%ytd); Prudential -0.10% (-1.53%ytd) and Global -2.57% (+4.56%ytd). The new Kruger Funds also retreated – Balanced by -0.20% and Prudential by -0.37%.

FAIS Conflict of Interest Disclosure

The annual fees for the A class include a fee up to 0.200% payable to Kruger, a fee up to 0.200% payable to Ci Collective Investments, a fee up to 0.125% payable to Analytics Consulting. All fees stated are exclusive of VAT.

Please note that in most cases where the Financial Services Provider (FSP) is a related party to the portfolio manager, the FSP/distributor may earn additional fees other than those charged by the portfolio manager. It is the FSP's responsibility to disclose such additional fees to the investor

Characteristics

This is a multi-asset low equity portfolio which means that it may invest in a spectrum of equity, bond, property and money market and tends to display reduced short term volatility and aims for long term capital growth. The portfolio may have a maximum equity exposure of up to 40% and complies with the regulation governing retirement funds. This portfolio may, at the discretion of the portfolio manager, invest up to 30% of the assets outside of South Africa plus an additional 10% of the assets in Africa excluding South Africa.

Risk Reward profile:

Typically, the lower the risk, the lower the potential return and the higher the risk, the higher the potential return. There is no guarantee that returns will be higher when investing in a portfolio with a higher risk profile. The risk profile for this portfolio is rated as low, as it may only invest up to 40% in equity securities, both locally and abroad. The risk refers only to volatility.

RISK DEFINITIONS

Market Risk

Equity markets are volatile and the price of equities fluctuate based on a number of factors such as changes in the economic climate, general movements in interest rates and the political and social environment which will also affect the value of the securities held in the unit trust, thereby affecting the overall value of the unit trust.

Currency Risk / Foreign Exchange Risk

This risk is associated with investments that are denominated in foreign currencies. When the foreign currencies fluctuate against the South African Rand, the investments face currency gains or losses.

Concentration Risk

Unit Trusts pool the assets of many investors and use the proceeds to buy a portfolio of securities. There are regulations in place which limit the amount that a unit trust may invest in securities, thereby spreading the risk across securities, asset classes and companies.

Liquidity Risk

This relates to the ability of the unit trust to trade out of a security held in the portfolio at or near to its fair value. This may impact on liquidity and in the case of foreign securities, the repatriation of funds.

Credit Risk

Credit risk is where an issuer of a non-equity security may not be able to make interest payments or repay the capital. This will impact the value of the unit trust.

Inflation Risk

The risk of potential loss in the purchasing power of your investment due to a general increase of consumer prices.

Political Risk

The risk that investment returns could suffer as a result of a country's political changes or instability in the country. Instability could come from changes in the country's government, policy makers or military.

Tax Risk

This risk relates to any change to tax laws or to the interpretation of existing tax laws which has an impact on the manner in which unit trusts are taxed.

Compliance Risk

This refers to the risk of not complying with the legislation, regulations, prescribed investment limits and internal policies and procedures by the manager or the portfolio manager.

This document is not intended to address the personal circumstances of any Financial Services Provider's (FSP's) client nor is it a risk analysis or examination of any client's financial needs. Collective Investment Schemes in Securities ("CIS") are generally medium to long terms investments. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to future performance. CIS are traded at ruling prices and can engage in borrowing and scrip lending. Different classes of units apply to this portfolio and are subject to different fees and charges. A schedule of fees and charges is available on request from Ci. Ci does not provide any guarantee either with respect to the capital or the return of the portfolio. Forward pricing is used. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. International Investments may include additional risks such as potential constraints on liquidity and repatriation of funds, macroeconomic risk, political risk, foreign exchange risk, tax risk, settlement risk as well as potential limitations on the availability of market information. The portfolio may be closed from time to time in order to manage it more efficiently in accordance with its mandate. A fund of funds is a portfolio that invests in portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for the fund of funds. The Kruger portfolios are portfolios established and administered by Ci, and Kruger has been appointed to manage and market the portfolios. Kruger is an indirect shareholder of Ci. As an indirect shareholder, Kruger may earn dividends from time to time and participation in any dividends may be linked to the revenue generated by Ci from the Kruger portfolios, and from any other Ci portfolios. Ci retains full legal responsibility for this co-named portfolio. Additional information on the portfolio may be obtained, free of charge, directly from Ci. Ci is an affiliate member of the Association for Savings & Investment SA (ASISA).

Total Expense Ratio (TER): The above TER % has been annualised and indicates the percentage of the value of the portfolio which was incurred as expenses relating to the administration of the portfolio over the rolling 3 year period or since fund inception, on an annualised basis. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER's cannot be regarded as an indication of future TER's.

Transaction Cost (TC): The above TC % has been annualised and indicates the percentage of the value of the portfolio which was incurred as costs relating to the buying and selling of the assets underlying the portfolio. Transaction Costs are a necessary cost in administering the portfolio and impacts portfolio returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of portfolio, investment decisions of the investment manager and the TER.

Total Investment Charge is the TER plus TC which indicates the percentage of the value of the portfolio which was incurred as costs relating to the investment of the portfolio.

Calculations are based on actual data where possible and best estimates where actual data is not available.

Performance quoted is for lump sum investment with income distributions, prior to deduction of applicable taxes, included. NAV to NAV figures have been used. The annualised return is the return of the performance period re-scaled to a period of one year. Performance is calculated for the portfolio and individual investor performance may differ as a result of initial fees, actual investment date, date of reinvestment and dividend withholding tax.
