The Oasis Crescent Equity Fund provides investors with the opportunity to invest in Shari'ah compliant equities that are listed on the stock exchange in South Africa. It seeks to provide long-term growth, while providing a level of volatility that is lower than its peers. The portfolio is actively managed and relies on the detailed independent analysis of the Oasis research team that seek to identify a well-diversified selection of undervalued equity instruments that will provide consistent earnings growth in the near future.

The Oasis Crescent Equity Fund adheres to the ethical investment guidelines of the range of the organisations Shari'ah investment products. In most cases, equity instruments provide the highest potential return over the long-term. However, the higher rates of long-term return may be associated with higher volatility.

**Investment Objective and Policy**

The Oasis Crescent Equity Fund provides investors with the opportunity to invest in Shari'ah compliant equities that are listed on the stock exchange in South Africa. It seeks to provide long-term growth, while providing a level of volatility that is lower than its peers. The portfolio is actively managed and relies on the detailed independent analysis of the Oasis research team that seek to identify a well-diversified selection of undervalued equity instruments that will provide consistent earnings growth in the near future.

The Oasis Crescent Equity Fund adheres to the ethical investment guidelines of the range of the organisations Shari'ah investment products. In most cases, equity instruments provide the highest potential return over the long-term. However, the higher rates of long-term return may be associated with higher volatility.
A global pandemic and self-imposed lockdowns lead to the sharpest contraction in global growth since the Great Depression. As the second quarter of 2020 closed, global policymakers still found themselves in the throes of managing rising infection rates in many regions – facing a challenging task of gradual reopening of their economies in a post-lockdown paradigm. Yet a truly profound policy response has prevented a health and economic crisis becoming a financial crisis as government opted for fiscal support while central banks reduced policy rates sharply, relaxed banking sector regulations and capital requirements. However, the recovery will still leave a large hole in global output together with severe economic repercussions such as rising unemployment, pressure on corporate profitability, higher bankruptcy filings and larger fiscal deficits.

According to the International Monetary Fund (IMF), the global fiscal support in response to the crisis stands at around $9 trillion or 12% of global Gross Domestic Product (GDP)\(^8\). The IMF estimates $16 trillion of additional debt in 2020 raising the total debt in the world to a new record high $200 trillion\(^2\) leading to three main implications. For instance, the size of the U.S. Fed’s balance sheet rose to around $2.4 trillion in late February to $7.1 trillion at the end of June\(^4\). In Europe, the ECB has increased its asset purchase programme to EUR 1.35 trillion, around 11% of GDP, and extended the support through mid-2021, while continuing to re-invest coupon until the end of 2022\(^2\).

The evolution of and the rate of change of the Fed balance sheet together with the run-up to and outcome of the U.S. November Presidential elections will play a vital role in the investment landscape in the coming months. Markets have entered a new niche where there are more fluctuations between phases of market wariness over a second wave of the Covid-19 infections that are sometimes slipping to optimism from a loosening of local lockdown restrictions and improving activity data and upside momentum in economic surprise indicators. China provides some cause for hope, with recent data showing that many parts of the economy are back to, or even above, pre-crisis levels. Nevertheless, the business environment remains deeply challenging, with insufficient global demand and deflation.

While growth and activity is expected to pick up further globally, it will be critical that policy support stays in place and evolves as new needs emerge.

Having only imported the virus on 5 March, the initial ‘curve’ of confirmed COVID-19 cases in South Africa (SA) was relatively slow. Since then, the infection rate accelerated rapidly as the virus spread to higher density areas while at the same time the draconian level 5 lockdown has been replaced by a more relaxed level 3 allowing 90% of the economy to ‘open’. Economic contractions are expected to be steep in the second quarter of 2020, with gradual recoveries in the third and fourth quarters of the year. The South African Reserve Bank has acted effectively to restore stability and has reduced the repo rate by a cumulative 275bps in the first five months of 2020 to 3.75%.

Inflationary pressures remain benign, with annual consumer price inflation printing at only 2.1% in May 2020, from 3.0% in April 2020.

On the growth front, Stats SA released the lagged Q1 GDP print which showed that output fell -0.1% year-on-year and 2.0% quarter-on-quarter (qoq) annualised, better than consensus expectation of a 4% decline qoq\(^1\). For 2020, SARB expects GDP to contract by 7.0%, compared to 6.1% in April 2020 with the Industrial sector decreased by 19.0% in Q1 2020 while the Consumer Goods and Distribution increased by 23.5%. For 2021, SARS forecasts a strong bounce back with GDP expected to grow by 3.8% in 2021.

Against the backdrop of the MSCI World Index recovering by 18.4% in Q2 2020, the JSE All Share (JSE ALSI) increased by 26.3% in Q2 2020 after declining by 23.5% in Q1 2020\(^8\). The Resources sector led the recovery with an increase of 41.3% in Q2 2020 after declining by 24.8% in Q1 2020 while the Industrial sector increased by 19.8% in Q1 2020 after declining by 8.4% in Q1 2020. Although Financials increased of GDP\(^7\). From 2021/22 fiscal year the budget outlines consolidation programme driven primarily by aggressive expenditure reduction, targeting a positive primary balance by 2023/24 fiscal year.

The JSE S&P 500 Index increased by 26.3% in Q2 2020 after declining by 23.5% in Q1 2020\(^8\). The recovery was led by the Technology sector with revenue gained by 41.3% in Q2 2020 after declining by 24.8% in Q1 2020 while the Industrial sector increased by 19.8% in Q1 2020 after declining by 8.4% in Q1 2020. Although Financials increased by 19.8% in Q1 2020, the sector is still lagging due to its decline of 43.0% in Q2 2020\(^9\). For now it appears that the massive global support from fiscal and monetary policy is fully offsetting the impact of revenue loss due to the Covid-19 related contraction in demand and job losses as well as the impact of corporate margin compression which will come through in the Q2 2020 results. However, there remains a lot of uncertainty around how fast corporates will be able to recover their profits in Q2 2020 and Q4 2020 following the significant declines expected to be reported in Q2 2020 and this could lead to substantial market volatility.

We remain cognisant of the differences for SA companies relative to developed markets in dealing with this Covid-19 recession because the SA economy and government finances were not in a strong position to start with and other than monetary policy relaxation there is not much capacity to support corporates. In addition, the Moody’s downgrade is increasing the cost and availability of debt and equity capital for SA corporates and it will get tougher for corporates with weak balance sheets and cash flows, but on the other hand it creates opportunities for corporates with strong balance sheets and cash flows to the higher barriers to entry. The current market volatility is ideal for active managers and Oasis is well positioned due to its focus on the best quality companies with strong balance sheets and we continue to emphasise diversification and robust stock selection in our portfolio construction.

The risk and reward indicator:
- The above risk number is based on the rate at which the value of the Fund has moved up and down in the past.
- The above indicator is based on historical data and may not be a reliable indication of the risk profile of the Fund.
- The risk and reward category shown is not guaranteed and may shift over time.
- The lowest category does not mean ‘risk free’.

The Fund may also be exposed to risks which the risk number does not adequately capture. These may include:
- The value of stock market investments, and the income from them, will fluctuate. This will cause the Fund price to fall as well as rise and you may not get back the original amount you invested.
- Any investment in international companies means that currency exchange rate fluctuations will have an impact on the feeder fund.
- The Fund invests in a variety of geographic regions and countries. It is therefore exposed to the market sentiment of that specific geographic region or country. This level of diversification is appropriate to deliver on our objective to generate real returns at a lower volatility for our clients over the long term.

Total Expense Ratio

Class A of the portfolio has a Total Expense Ratio (TER) of 2.32% for the period from 1 April 2017 to 31 March 2020. This implies that 2.32% of the average Net Asset Value of the portfolio was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. The ratio does not include transaction costs. Transaction cost was 0.04%.

Class A: performance fees are payable in the case of outperformance of the underlying portfolio, relative to its benchmark. Performance is calculated for the portfolio, and individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. The sharing ratio of the performance fee is 20% of the outperformance, and the total fees are capped at 3%. This fee is calculated and accrued daily, based on the daily market value of the Investment Portfolio, and paid to the Investment Manager on a monthly basis.
This document is the Minimum Disclosure Document in terms of BN92 of 2014 of the Collective Investment Schemes Control Act, 2002 and also serves as a fund fact sheet. Collective Investment Schemes in Securities (CIS) are generally medium to long term investments. The value of participatory interests (units) may go down as well as up and past performance is not necessarily a guide to the future.

Different classes of units apply to some of the Oasis Funds, which are subject to different fees and charges. A schedule of fees and charges and maximum commissions is available from the management company on request. Commission and incentives may be paid and if so, would be included in the overall costs. CIS are traded at ruling prices and forward pricing is used. CIS can engage in borrowing and scrip lending. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. No guarantee is provided with respect to capital or return.

Portfolios are valued at 15h00 daily. All necessary documentation must be received before 10h00. CIS are calculated on a net asset value basis which is the total value of all assets in the portfolio including any income accruals and less any permissible deductions from the portfolio which may include brokerage, commissions, STT, auditor's fees, bank charges, trustee and custodian fees. CIS prices are available daily on www.oasiscrescent.com. Class A: performance fees are payable in the case of outperformance of the underlying portfolio, relative to its benchmark. Performance is calculated for the portfolio, and individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. The sharing ratio of the performance fee is 20% of the outperformance, and the total fees are capped at 3%. This fee is calculated and accrued daily, based on the daily market value of the Investment Portfolio, and paid to the Investment Manager on a monthly basis. For a full disclosure on performance fees FAQs visit www.oasiscrescent.com.

The manager may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Member of the Association for Savings and Investment SA. The above portfolio performance is calculated on a NAV to NAV basis and does not take initial fees into account. Income is reinvested on the ex dividend date. Actual investment performance will differ based on the initial fees applicable, the actual investment date and the date of reinvestment of income. Figures quoted are from Micropal and I Net Bridge for the period ending 30 June 2020 for a lump sum investment using NAV-NAV prices with income distributions reinvested.
