

## FUND INFORMATION

### RISK PROFILE

### RECOMMENDED MINIMUM INVESTMENT TERM

### FUND OBJECTIVE

The fund aims to offer a high level of income, together with relative capital stability. It aims to pay out a high regular income without putting the investor's money at undue risk. It aims to achieve higher than money market returns by taking on marginally more risk.

### WHO IS THIS FUND FOR?

This fund is suited to investors seeking capital stability. It can be used as a secure parking bay in times of stock market instability as well as a means of phasing money into an equity (share) fund over a period of time.

### INVESTMENT MANDATE

The fund invests in local interest-bearing investments including fixed and floating rate bonds and money market instruments. The average duration of the fund will always be less than two years, which contributes to its relative capital stability. Derivatives may be used for efficient portfolio management purposes.

### REGULATION 28 COMPLIANCE

The fund does not comply with the asset allocation sublimits set out in Regulation 28 of the Pension Funds Act, and therefore the fund is not Regulation 28 compliant.

## FUND MANAGER INFORMATION

### WIKUS FURSTENBERG | PORTFOLIO MANAGER

- MCom (Economics)
- 23 years of investment experience

the peak of 6.75% in July last year, 150bps of which got trimmed this quarter. The combination of the worst expected recession in decades, very strong disinflationary forces and the generally low level of global rates enabled the SARB to respond in this manner. While the extent of the recession and the expected shape of the economic recovery remain unclear, the inflation picture is much clearer. Although the five-week hard lockdown created challenges with the collection of survey data, it is clear that inflation is not a concern right now. In April, the rate of inflation at consumer and producer levels slowed to 3.0% and 1.2% respectively.

period ending June.

The fund returned 7.9% net of fees for the 12-month period ending June, outperforming the benchmark by 1.7%. The outperformance was the result of a combination of factors. The consistent contribution from higher-yielding non-government variable and fixed rate holdings forms to core, while the fund also benefited from the holding of shorter-dated fixed rate government bonds, in particular the R186 holding.

## FUND COMMENTARY

In a relatively short space of time, the Covid-19 pandemic has caused one of the most eventful – if not horrific – quarters in decades, on a global scale. The supportive role that governments have played globally in an effort to offset the health and economic impact is unprecedented. This classic example of a Keynesian-type intervention comes at a cost, with larger, unplanned fiscal deficits being the most visible. For this reason, the tabling of an unprecedented South African Supplementary Budget at the end of June attracted much interest. In stark contrast to the 2008 Global Financial Crisis, this time around the country had to initiate its fiscal response to a crisis from a much weaker position. Sharply higher pandemic-related expenditure and a dramatic drop in tax revenue collections due to the economic implosion, dragged fiscal finances into an even more precarious position, with mutterings of a debt trap.

Apart from direct market participation in the bond market and a host of other measures to assist the monetary sector, the South African Reserve Bank (SARB) also responded to the devastating impact of the pandemic by lowering the repo rate to 3.75% for a total reduction of 300 basis points (bps) from

The short end of the yield curve moved sharply lower in tandem with the repo rate adjustment. In contrast, the yields of longer-dated bonds were kept at relatively elevated levels as rising fiscal concerns overshadowed the disinflationary backdrop. In the nominal bond market, the yield of the 10-year fixed rate government bond traded in a range of 8.72% to 11.21% during the second quarter before closing the period at 9.28%, or 155bps below the March 2020 close. The yield spread between the 10- and 30-year points reached a peak of 2.14%. This volatility was also evident in the inflation-linked bond market where the yield of the 10-year benchmark bond traded in a wide range of 4.01% to 4.68%.

Ultimately, the spike in yields, and thus improved market valuation, lured the bears from their caves, despite the fact that the general economic and fiscal outlook kept deteriorating. In the case of the nominal bond market, the JSE All Bond Index (ALBI) returned 9.94%, with bonds in the 7- to 12-year maturity band leading with an impressive 13.23% during the second quarter. The comeback by the inflation-linked bond market was less noteworthy with the JSE Inflation-linked Government Index (IGOV) rendering a return of 4.75%. That said, both indices managed to beat the cash return of 1.12% by a significant margin for the three-month

The aggressive monetary policy easing in the past few months pushed cash right down the ladder of investment alternatives. In response, we opted to keep the fund fully invested in longer-dated money market instruments, variable rate bonds and shorter-dated fixed rate bonds. In terms of the latter, we retained a strong preference for the R186 (maturity 2026), using bouts of market weakness to incrementally add to this position. The selection of the R186 is mainly based on its annual coupon rate of 10.5% and a relatively low interest rate risk compared to longer-dated bonds. In addition, its position on a steeply sloped section of the yield curve opens the door to a significant total return contribution as a result of the potential roll-down effect in the medium term. Although not completely immune, this bond would also be less exposed to negative market developments. It is important to note that the fund does not hold fixed rate assets with a term to maturity longer than seven years, in response to the fast-deteriorating fiscal situation, which holds a significant risk to longer-dated fixed rate bonds. This caution is also reflected by the fund's total modified duration at 1.4, which is slightly shorter than its benchmark and well below the maximum mandate limit of 2.0.

## OTHER INVESTMENT CONSIDERATIONS

### MINIMUM INVESTMENTS:

- Monthly: R500
- Lump sum: R10 000
- Ad hoc: R500

### INITIAL CHARGES (Incl. VAT)\*:

There is no initial administration charge for investment transactions of R500 and above. Initial adviser fee will be between 0% and 3.45%. Investment transactions below the R500 fund minimum incur a 2.30% administration charge.

\* Please note: Initial charges do not apply to the Class B funds.

## ONGOING

	Class A	Class B1*	Class R
Annual service fees (excl. VAT**)	0.75%	0.60%	0.60%

\* Please note: The Class B1 fund is available through investment platforms such as Old Mutual Wealth.

The fee is accrued daily and paid to the management company on a monthly basis. Other charges incurred by the fund, and deducted from its portfolio, are included in the TER. A portion of Old Mutual Unit Trusts' annual service fees may be paid to administration platforms.

### TAX REFERENCE NUMBER: 9430/004/60/7

ISIN CODES:	Class R	ZAE000020822
	Class B1	ZAE000174132

Total Expenses (Incl. Annual Service Fee) (31/03/2020)	36 Months		12 Months	
	Class R	Class B1*	Class R	Class B1*
Total Expense Ratio (TER) Incl. VAT	0.88%	0.71%	0.88%	0.71%
Transaction Cost (TC)	0.01%	0.01%	0.02%	0.02%
Total Investment Charge	0.89%	0.72%	0.90%	0.73%

\* Please note: The Class B1 fund is available through investment platforms such as Old Mutual Wealth.

TER is a historic measure of the impact the deduction of management and operating costs has on a fund's value. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER, which includes the annual service fee, may not necessarily be an accurate indication of future TERs. Transaction Cost (TC) is a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

Funds are also available via Old Mutual Wealth and MAX Investments.

**FUTUREGROWTH**

/ ASSET MANAGEMENT

We aim to treat our clients fairly by giving you the information you need in as simple a way as possible, to enable you to make informed decisions about your investments.

- We believe in the value of sound advice and so recommend that you consult a financial planner before buying or selling unit trusts. You may, however, buy and sell without the help of a financial planner. If you do use a planner, we remind you that they are entitled to certain negotiable planner fees or commissions.
- You should ideally see unit trusts as a medium- to long-term investment. The fluctuations of particular investment strategies affect how a fund performs. Your fund value may go up or down. Therefore, we cannot guarantee the investment capital or return of your investment. How a fund has performed in the past does not necessarily indicate how it will perform in the future.
- The fund fees and costs that we charge for managing your investment are disclosed in this Minimum Disclosure Document (MDD) and in the table of fees and charges, both of which are available on our public website or from our contact centre.
- Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained, free of charge, from Old Mutual Unit Trust Managers (RF) (Pty) Ltd, from our public website at [www.oldmutualinvest.com](http://www.oldmutualinvest.com) or our contact centre on 0860 234 234.
- Our cut-off time for client instructions (e.g. buying and selling) is at 15:00 each working day for all our funds, except the Money Market Funds, the price of which is set at 13:00. These are also the times we value our funds to determine the daily ruling price (other than at month-end when we value the Old Mutual Index Funds and Old Mutual Multi-Managers Fund of Funds range at 17:00 close). Daily prices are available on the public website and in the media.
- Unit trusts are traded at ruling prices, may borrow to fund client disinvestments and may engage in scrip lending. The daily ruling price is based on the current market value of the fund's assets plus income minus expenses (NAV of the portfolio) divided by the number of units on issue.
- Income funds derive their income primarily from interest-bearing instruments as defined. The yield is a current yield and is calculated daily.
- The Net Asset Value to Net Asset Value figures are used for the performance calculations. The performance quoted is for a lump sum investment. The performance calculation includes income distributions prior to the deduction of taxes and distributions are reinvested on the ex-dividend date. Performances may differ as a result of actual initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Annualised returns are the weighted average compound growth rates over the performance period measured. Performances are in ZAR and as at 30 June 2020.
