

PRESCIENT POSITIVE RETURN QUANTPLUS® FUND (A2)

MINIMUM DISCLOSURE DOCUMENT

INVESTMENT AND RETURN OBJECTIVE

The Fund aims to outperform CPI + 3% per annum over the medium term by generating consistent positive returns while protecting capital over rolling 12-month periods.

INVESTMENT PROCESS

The Fund invests in cash, capital market instruments and equities with an active asset allocation overlay. The equity component of the Fund is protected to reduce the risk of capital loss. The Fund is thus structured to optimise returns in positive market cycles and to protect capital during negative periods/cycles.

WHO SHOULD INVEST

Investors seeking real returns above cash through the market cycle (typically 7 year periods) but also require capital preservation and downside protection over the shorter term (typically 1 year periods). This Fund is suitable to investors with a medium- to long-term investment horizon and is Regulation 28 compliant.

RISK INDICATOR DEFINITION

These portfolios typically have moderate equity exposure or in the case of bond funds, longer duration bond exposure, resulting in some capital volatility over the shorter term. They are managed in such a manner that the probability of capital losses over one year periods is unlikely. These portfolios typically target returns in the region of 3% - 4% above inflation over the long term.

FUND COMMENTARY

The International Monetary Fund (IMF) approved a \$4.3-billion loan to South Africa via its Rapid Financing Instrument (RFI) to help deal with the immediate financial consequences of the global health crisis. Unlike funding obtained under a full-scale IMF structural adjustment program, the conditions attached to RFI funding are less strenuous. Nonetheless, the reformists within the ruling party may welcome political backing from the IMF and the international finance establishment in order to push through their "structural reform" agenda and fiscal austerity. On the monetary policy front, the South African Reserve Bank's (SARB) Monetary Policy Committee (MPC) reduced the repo rate by 25 basis points – taking cumulative interest rate reductions year-to-date to 300 basis points. This translates into the lowest repo rate on record in four decades. Three out of five members of the MPC preferred a cut of a quarter of a percentage point, with the other two in favour of keeping rates on hold. While inflation remains muted (2.2% year-on-year in June) due to the lockdown-induced negative demand shock, there are tentative signs that we are moving closer to the trough of the rate-cutting cycle. Looking abroad, the US Federal Reserve (the Fed) left interest rates unchanged near zero in its monetary policy update. The Fed chairman Jerome Powell also repeated the pledge to keep borrowing costs low until confident the economy has weathered recent events. Even though the economy was beginning to rebound after grinding to a halt during the pandemic lockdown, the level of economic activity was still well below the levels from the start of the year, the Fed said. While Congress' stimulus package helped keep businesses open and people in their homes, America is still in the midst of a joblessness crisis and not all positions lost are expected to return. That means that some people will need support even when the economy recovers. All in all, more still needs to be done in terms of both fiscal and monetary stimulus, Powell said. Furthermore, the central bank announced an extension of various pandemic lending facilities, including the main street lending facility that lends to SMMEs. The facilities will now run through the end of the year. The sustained liquidity provisioning by global central banks has found a home in local and global equities sustaining their rally to pre-crisis highs. The underlying economic situation however, continues to deteriorate, with sentiment indicators at all time lows and unemployment at all time highs. The Positive Return Portfolio therefore favours fixed income assets over equity and continues to maintain very low equity exposure, while holding preference shares, inflation linked bonds (ILB), bonds, and listed property. July was a mixed bag of returns across asset classes with the JSE Top40 Index (+2.4%), Albi (0.6%) and Stefi (0.4%) ending the month up, while listed property (-3.2%), preference shares (-2.9%) and inflation linked bonds (-1.1%) ended the month down.

Contributors to performance: Bond and low duration income assets contributed to performance.

Detractors from performance: Listed property, inflation linked bonds and preference shares detracted from performance.

PRESCIENT POSITIVE RETURN QUANTPLUS[®] FUND (A2)

GLOSSARY

Annualised performance: Annualised performance show longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

CPU: Cents Per Unit to the Glossary

Alpha: Denoted the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Sensitivity Analysis: Shows the expected return of the Fund for the Performance Projection Period (label on vertical axis), at the end of the Performance Projection Period based on a range of potential moves in the equity market from this month-end to the end of the Performance Projection Period.

Fund Specific Risks

Default Risk: The risk that the issuers of fixed income instruments may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

% Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Derivative counterparty risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction cost is a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time, Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers, including actual initial and all ongoing fees, with income reinvested on the reinvestment date. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
