

**Investment objective (Summary of investment policy)**

The portfolio is a Rand denominated global multi-asset flexible Feeder Fund, feeding solely into the PSG Wealth Global Flexible Fund of Funds (USD) IC Limited Class A (the "underlying fund"). The primary objective of the policy, via its holding in the underlying fund, is to maximize capital returns through active management of an internationally diversified portfolio of unconstrained multi asset collective investment schemes established, recognized or regulated in any Approved Country and assets in liquid form. The emphasis of the Manager's investment approach within the underlying fund will be on equities but there will be no specific limit on the asset classes in which the Manager may invest with the proviso that there will be a minimum exposure of 50% net equity holdings (although market conditions may be adverse from time to time and at the discretion of the Directors of the underlying fund may hold up to 100% cash).

**Who should consider investing?**

The fund sits at the top end of the risk/return spectrum. This means investors should be comfortable with fluctuations on global stock markets. The risk of monetary loss is high due to high volatility in currency rates and global markets.

The fund is suitable for investors who:

- are seeking an unconstrained (flexible) global multi-asset portfolio
- want long-term wealth creation
- have a long-term investment time horizon of at least five years

**Disclaimer**

Collective Investment Schemes (CIS) in securities are generally medium to long-term investments. The value of participatory interests (units) or the investment may go down as well as up and past performance is not a guide to future performance. Fluctuations or movements in the exchange rates may cause the value of underlying international investments to go up or down. CIS are traded at ruling prices and can engage in borrowing and scrip lending. The Fund may borrow up to 10% of its market value to bridge insufficient liquidity. Where foreign securities are included in a portfolio, the portfolio is exposed to risks such as potential constraints on liquidity and the repatriation of funds, macroeconomic, political, foreign exchange, tax, settlement and potential limitations on the availability of market information. The portfolios may be capped at any time in order for them to be managed in accordance with their mandate. Excessive withdrawals from the portfolio may place the portfolio under liquidity pressures and in such circumstances a process of ring-fencing of withdrawal instructions and managed payouts over time may be followed. PSG Collective Investments (RF) Limited does not provide any guarantee either with respect to the capital or the return of the portfolio.

**Feeder Funds**

A Feeder Fund is a portfolio which, apart from assets in liquid form, invests in a single portfolio of a collective investment scheme, which levies its own charges and which could result in a higher fee structure for the feeder fund.

**Performance**

All performance data for a lump sum, net of fees, includes income and assumes reinvestment of income on a NAV to NAV basis. Annualised performances show longer term performance rescaled over a 12 month period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Performance is calculated for the portfolio and individual investor performance may differ as a result thereof. The portfolio is valued at 15h00 daily. Income distributions are net of any applicable taxes. Actual annual figures are available to the investor on request. Prices are published daily and available on the website <https://www.psg.co.za/wealth/multi-management/wealth-solutions> and in the daily newspapers. Figures quoted are from Morningstar Inc.

**Pricing**

Forward pricing is used. Unit trust prices are calculated on a net asset value (NAV) basis, which is the market value of all assets in the Fund including income accruals less permissible deductions divided by the number of units in issue.

**What is a total expense ratio?**

The Total Expense Ratio (TER) is the annualised percentage of the fund's average assets under management that has been used to pay the fund's actual expenses over the past three years. This percentage of the average Net Asset Value (NAV) of the portfolio was incurred as charges, levies and fees related to the management of the portfolio. A higher TER ratio does not necessarily imply a poor return, nor does a low TER ratio imply a good return. The current TER cannot be regarded as an indication of future TERs. Part of the Annual Management Fee is payable to the financial intermediary. The sum of the TER and transaction costs is shown as the Total Investment Charge. Since fund returns are quoted as per the deduction of these expenses, the TER and Transaction costs should not be deducted again from published returns.

**Transaction costs**

Transaction costs are shown separately and are a necessary cost in administering the Financial Product and impacts Financial Product returns. Transaction costs should not be considered in isolation as returns may be affected by many other factors over time including market returns, the type of financial product, the investment decisions of the investment manager and the TER.

**Fees**

A schedule of fees and charges and maximum commissions is available on request from PSG Collective Investments (RF) Limited. Commission and incentives may be paid and, if so, are included in the overall costs. Different classes of Participatory Interest can apply to these portfolios and are subject to different fees, charges and possibly dividend withholding tax and will thus have differing performances.
