

INVESTMENT OBJECTIVE

The objective is to generate moderate to high capital growth over the medium to long term.

INVESTMENT POLICY

The Fund may invest in a broad range of local and international asset classes, using primarily factor based as well as other passive and enhanced index investment strategies. Factor strategies to be applied may include factors such as growth, momentum, quality and value. The portfolio's asset allocation will be determined by applying a top-down approach influenced predominantly by long term asset class risk premia and macro-economic considerations, as well as a bottom-up approach influenced predominantly by fundamental asset class valuations, across a broad range of well-considered valuation criteria. Based upon input from this top down and bottom up framework, the manager will apply their prudent discretion to determine the most optimal long term strategic as well as tactical asset class positioning for the portfolio. The portfolio is subject to maximum equity exposure of 75% of the portfolio's net asset value. The portfolio may from time to time invest in listed and unlisted financial instruments.

RISK PROFILE

Moderate - High Risk

- This portfolio holds more equity exposure than a medium risk portfolio but less than a high-risk portfolio. In turn the expected volatility is higher than a medium risk portfolio, but less than a high-risk portfolio. The probability of losses is higher than that of a medium risk portfolio, but less than a high-risk portfolio and the expected potential long-term investment returns could therefore be higher than a medium risk portfolio.
- Where the asset allocation contained in this MDD reflects offshore exposure, the portfolio is exposed to currency risks.
- The portfolio is exposed to equity as well as default and interest rate risks.
- Therefore, it is suitable for medium to long-term investment horizons.
