RISK PROFILE

Moderate - High Risk  
• This portfolio holds more exposure to the medium risk portfolio but less than a high-risk portfolio. In turn the expected volatility is higher than a medium risk portfolio, but less than a high-risk portfolio. The probability of losses is higher than that of a medium risk portfolio, but less than a high-risk portfolio and the expected potential long term investment returns could therefore be higher than a medium risk portfolio.  
• Where the asset allocation contained in this MDD reflects offshore exposure, the portfolio is exposed to currency risks.  
• The portfolio is exposed to equity as well as default and interest rate risks.  
• Therefore, it is suitable for medium to long term investment horizons.
